Berlin-Jakarta November 2018

We are hiring

Project Director for setting up a greenfield production unit for a German / US company in Indonesia

Background

Our client is a leading manufacturer and supplier for all pre-press stages as well as rotogravure and embossing cylinders. In line with the international expansion we are recruiting personnel for the new production facility, which we are developing on greenfield basis in 2019 in Surabaya, Indonesia.

Job Requirements: Phase1 (optional on Interim Basis)

For the initial stage we are looking for a hands-on and self-motivated manager with relevant experience in building up corporate and production structures in Asia. The ideal candidate has experience in Indonesia or other ASEAN countries. The initial phase 1 will last around 6 months (training, company set up, building of factory, import of machines and technology, recruiting of the commercial and technical team members, licenses, financing, sales and service etc.)

We are looking for a talented "all-rounder" who is not shy of taking on new tasks in an environment where everything must be built from scratch.

Job Requirements: Phase 2 (Employment basis)

Once the company becomes operational the "all-rounder" of Phase 1 should develop into a full CEO / General Manager of the company and take care of the development for the next 3-5 years. The job requires an entrepreneurial outlook and a certain technical enthusiasm in the pre-press field.

Support and experience from similar exercises of the company in Russia, Turkey and other locations is available.

Languages: English, German, Bahasa Indonesia (nice to have).

An attractive remuneration package will be offered.

Replies with a cover letter, CV and references are requested to be sent by email to:
